All Rights Reserved.Q: Implement a file upload filter in Symfony2 I'm trying to do a file upload in a Symfony2 controller. The problem I'm having is that it's processing only the data which is in the request, and not the data that I'm retrieving from the file itself. When I send this form, Symfony only take the following parameters from it: first_name, last_name, email, password Then, in my controller, I have the following code: `$request = $this->getRequest(); $image = $request->request->files->get('photo');` The parameter `$image` is set to null. If I do a debug var dump of the request, I can see that only the params I mentioned 82157476af
